

## WHEN THE PEOPLE YOU LOVE TURN OUT TO BE NSA

NSA agents, or people who work for the National Security Agency, do not actually fit the stereotype of a secret government agent; although the status of their employment with the NSA is highly guarded and kept secret from non-government employees on pain of death, it is because they don't want you to know that they belong to a government sanctioned rape gang. NSA agents are not a bunch of sophisticated computer nerds; they are your everyday people who were recruited into joining the NSA based on their lack of ethics and their historical behavioral patterns of sexual violence. NSA agents go to prison sometimes when they get caught participating in commercialized sexual violence.

Every NSA agent is incredibly skilled at lying, falsifying emotion, and wearing a social mask that hides their violence; it is a requirement to be hired. All NSA agents are trained in applying trauma-based mind control. Trauma-based mind control is entirely based on abuse of trust and getting people to doubt their own knowingness and intuition because the ways their trust has been abused are too extreme to believe. They commit crimes of abuse of trust that are so extreme that if the victim were to find out, that person would sit there in shock shaking their head and thinking, "I can't believe you went there, it's just so over the top." A classic example of this is what the NSA's partner in crime, the CIA, developed as a method of trauma-based mind control, which I like to call the Friends N' Family Gang Rape. Breaking the law against rape does not require that you be there in the same room with the person surviving sexual assault; watching a rape take place live on Skype or WhatsApp or on the DarkWeb means you have committed felony rape in the first degree upon that person.

### FRIENDS N' FAMILY GANG RAPES

The CIA developed a method of inducing the maximum amount of trauma possible which could be completely repressed from the conscious awareness of any adult person subjected to this form of abuse. Because abuse of trust by the people closest to you is the most traumatic emotional injury any person can sustain, maximizing this factor by multiplying the amount of people close to you who participate in the abuse makes the injury exponentially more painful and difficult to release from repression. Family members or relatives who have Sexual Sadism Disorder can be recruited by the CIA, NSA, or FBI to participate in a Friends N' Family Gang Rape upon you without ever becoming an agent. It is often difficult to understand that incest would not be a barrier for people who do not have Pedophilic Disorder, but people who are infected with sexual violence are not known for having much in the way of boundaries around ethics.

As for the friends who participate in these Friends N' Family Gang Rapes, they committed conspiracy to commit rape upon you before you ever met; they infiltrated your social life, your community, with the intent to abuse your trust. Conspiracy to commit rape is a felony and prosecution does not require that the perpetrator have any participation in the rape. For example, a person who has sold GHB broke the law against conspiracy to commit rape.

## BORON DRUGGING

There is a date rape drug not known to the public that has been used by FBI, NSA, and CIA agents for raping people while unconscious. This drug carries about a 30% risk of death through reduction of oxygen to the brain. The violent sex offenders who have a thing for raping people while they are dying enjoy the use of this particular date rape drug as their victim could possibly die at any time during the rape. The drug is administered by being rubbed into the gums of a person who is already deep asleep, such as someone who had a few alcoholic drinks, or someone who had already been drugged with a low dose of GHB to make them sleep deeper. The boron date rape drug takes about 20 minutes to kick in after it has been rubbed into the gums; it keeps a person totally unconscious during intense assaults to their body for about 25 minutes, then it must be re-administered again every 25 minutes to maintain the unconscious state. A person can wake up and attain full consciousness within 30 minutes of the boron date rape drug wearing off without feeling any side effects; it has a very strong numbing effect to the entire body so noticing any pain or injury or disturbance is unlikely.

The drug has a strong red-pink-brown color to it from the boron, which is one of the elements in its chemical formula.

Repeated dosing with the boron date rape drug alters the skin's relationship to healing from sun exposure and can make a person become sunburned faster. A person who has been repeatedly dosed with this drug will excrete it from their body quite visibly through the skin, tongue, gums, and teeth. The detoxification, elimination, and excretion of this drug out of the body causes gingivitis. Skin discoloration in the form of few tiny bright pink dots may appear long term as the body works to eliminate the residue of this drug from your system. You may notice that with minor scrapes or scratches to the skin the lymphatic fluid that accompanies blood at the surface of your skin has a strong pink-brown color to it that does not match the normal color of your blood. A symptom of the body detoxing and eliminating repeated doses of the boron date rape drug is the skin peeling in areas where there has been no sun exposure.

Medical research into an anti-dote for counteracting the long term effects of repeated poisoning with the boron date rape drug is underway.
