Out of all the current population of United States citizens who are licensed to practice urology through a state medical board: 36% of them currently have Pedophilic Disorder as defined by the diagnostic criteria of the DSM-5, 100% of them currently have Sexual Sadism Disorder as defined by the diagnostic criteria of the DSM-5, 36% of them have committed felony child sex abuse (any type of child sex abuse as defined by any of the state laws or as defined by the federal laws of the U.S. government) within the last five years.

Out of all the current population of United States citizens who are licensed to practice medicine through a state medical board and they are what we call general practice doctors: 60% of them currently have Pedophilic Disorder as defined by the diagnostic criteria of the DSM-5, 94% of them currently have Sexual Sadism Disorder as defined by the diagnostic criteria of the DSM-5, 60% of them have committed felony child sex abuse (any type of child sex abuse as defined by any of the state laws or as defined by the federal laws of the U.S. government) within the last five years.

Out of all the current population of United States citizens who are licensed to practice acupuncture through a state medical board: 78% of them currently have Pedophilic Disorder as defined by the diagnostic criteria of the DSM-5, 96% of them currently have Sexual Sadism Disorder as defined by the diagnostic criteria of the DSM-5, 78% of them have committed felony child sex abuse (any type of child sex abuse as defined by any of the state laws or as defined by the federal laws of the U.S. government) within the last five years.

Out of all the current population of United States citizens who are licensed to practice naturopathic medicine through a state medical board: 67% of them currently have Pedophilic Disorder as defined by the diagnostic criteria of the DSM-5, 97% of them currently have Sexual Sadism Disorder as defined by the diagnostic criteria of the DSM-5, 67% of them have committed felony child sex abuse (any type of child sex abuse as defined by any of the state laws or as defined by the federal laws of the U.S. government) within the last five years.

Out of all the current population of United States citizens who are licensed to practice psychology but not psychiatry through a state medical board: 95% of them currently have Pedophilic Disorder as defined by the diagnostic criteria of the DSM-5, 98% of them currently have Sexual Sadism Disorder as defined by the diagnostic criteria of the DSM-5, 92% of them have committed felony child sex abuse (any type of child sex abuse as defined by any of the state laws or as defined by the federal laws of the U.S. government) within the last five years.

This census was conducted on September 24, 2018.

Every United States citizen who has attended med school within the last 13 years has survived trauma-based mind control while they were in doctorate school. This does not mean that they all survived physical violence; unwarranted surveillance is extremely abusive and traumatizing. People who were not employees of the U.S. government had access to our government's surveillance, and paired that with the use of lie-detector machines for stalking med student's activities. People burning with creativity are frequently stalked by those who are threatened by the power they have yet to explore within themselves.
